

CUT ABRASIVE USE BY 30%!

Case Study – Industrial Coatings Removal

The no-clog pot –
you can't stop a Sanstorm

Benefits: Save a minimum of 30% in your abrasive consumables due to the "normalizing" action which makes each abrasive granule maximized for their cutting effect thus reducing consumption while increasing production.

Features: Sanstorm is the ONLY machine which offers the two most important conditions (constant abrasive discharge and positive abrasive control) of any pressure blaster. Sanstorm also offers ease of adjusting media flow thus ensuring efficient blasting for every project.

Results: Restores Surfaces in a fraction of normal cleaning time - using a fraction of the blast media. The pictured heavy rust door was cleaned in 15 seconds, that is 22 square feet of cleaning in 1/4 of a minute!

**These machines
are BUILT TO LAST**

6 cubic feet

2 cubic feet

3.5 cubic feet

"This is probably the best and simplest blast unit I have ever seen or sold. It is extremely simple to use and fill and training on it takes about ten minutes. Unlike other units, you can see how much material is remaining in the pot, you can reach in and grab a handful to determine what kind it is, it refills in about 1/4 the time of others, it rarely plugs up, cannot be overfilled, has fewer valves and diaphragms than most others and weighs less and is smaller than others of the same capacity making it ergonomically friendly. Dollar for dollar, this is by far the best unit available today."
